

CIVIL / TRANSPORTATION ENGINEERS

Group Mackenzie, a multidiscipline engineering and architecture firm, has an opening in our Portland / Vancouver offices for a civil / transportation designer from the entry-level (2009-2010 graduate) to up to two years of experience in any combination of site design, traffic analysis, public infrastructure design, and land development services. Candidates must have a civil engineering degree, EIT certification, Autocad and/or traffic software (SYNCHRO, SimTraffic) skills, and the ability to work and design in a team environment. Company provides excellent benefits including a company-sponsored pension plan, a 401k investment plan, and medical, dental, and vision plans.

We offer a challenging work environment toward design and creative solutions, and opportunities for career advancement. Group Mackenzie's project work ranges from site design on a variety of commercial and industrial developments to community / development master planning and infrastructure (roads, utilities) design. Our engineering staff coordinates with other in-house disciplines (landscape architecture, architecture, land use planning) as well as public agencies and jurisdictions to gain project completion. Through this, our team of professionals design durable, sustainable, cost effective, and innovative projects that create value for our clients and their communities.
